

Alerting at its Best

www.swissphone.com

### Loud and bright

At an exceptional alerting volume of more than 95 dBA, the new Swissphone pager will most certainly be heard. The alert messages can also be ascending or identified in mute mode at night thanks to the multi-coloured alarm LED.

### Your logo on the s.QUAD

It's possible to customize the modern design of the s.QUAD. We can laser-engrave or print your logo or image onto the s.QUAD to provide you with a personalized pager for on the go.

### Functional and robust

The s.QUAD is sure to impress as it is comfortable to wear and highly robust. The lightweight compact design fits comfortably on a belt for daily use and is hardly noticeable, weighing just 108 g. The s.QUAD is both waterproof and dustproof. What's more, it successfully passes the two-meter drop test to prove just how rugged the pager really is.

### Excellent reception

An unrivalled sensitivity and an extensive operating time of approximately 180 hours guarantee that s.QUAD reliably receives messages.

#### The message at a glance

In addition to its familiar intuitive usability, the s.QUAD also features a large, high-resolution display and a white backlight. Furthermore, various font sizes and unique display technology ensure that the message can always be clearly read, even in direct sunlight.

## Single and multi-device charging stations

Both a single charging station and a multi-device charging station for up to eight pagers are available for the s.QUAD. The single charging station features a relay output and antenna connection.

# SWISSPHONE

### Targeted alerting with s.ONE

Whether it's on the pager screen or your smartphone, our new management tool displays current emergency services availability or how many first responders are already traveling to the fire station. This means that s.ONE can be used to re-alert if necessary.

### Response from s.QUAD

The first responders only need to press one button on the pager to acknowledge the alert with "I'm coming" or "I'm not coming". The response is forwarded as a mobile/cellular data message via Bluetooth and a smartphone. The operations director can determine the strength of the team at a glance.

## App for iOS and Android smartphones

The new app for iOS and Android smartphones offers additional individual opportunities for use. The app can be used, for example, to program the start screen, alarm and signal sounds, and key lock as desired.

### Hybrid alarm

Bluetooth technology makes it possible to connect the s.QUAD with a compatible smartphone. The s.QUAD can receive alarms via paging and mobile/cellular data messages, thanks to Bluetooth pairing. The hybrid solution makes the alert faster and more secure. Bluetooth also enables connection to our presence monitor, which identifies the s.QUAD users when they enter the fire station.

We will be happy to provide additional information and are available to answer your questions.
